Abstract (en)
[origin: US2003042670A1] The invention concerns an aligning unit (8) for sheet-like material (1), which is aligned with rotation elements (25), (34) before the passage of a conveying plane (9) with respect to the conveying direction (22) through a machine processing sheet-like material (1). The sheet-like material (1) is gripped on at least one side by the rotation elements (25), (34). The area of contact (36), (44) between the sheet-like material (1) and segmented rollers (25) aligning the latter is minimized.
