Abstract (en)
[origin: US2003042669A1] The invention relates to an alignment unit for sheet material (1) which is upstream of the conveyor plane (9) for the sheet material (1). Feed of the sheet material (1) takes place via driven surfaces (33) which touch at least one side of the sheet material (1). The alignment unit (8) holds rotation elements (25, 38) which grip the sheet material (1) and which correct the offset of the sheet material (1) with reference to the direction (22) in which it is running. Of them, at least two rotation elements (25) which lie in one plane can be moved to the remaining rotation elements (38).
