Abstract (en)
[origin: EP1170436A1] Winter garden awning comprises a cloth shaft (3) for winding an awning cloth (2) to form a cloth reel and lateral guiding rails for guiding the awning cloth on unwinding. The awning cloth has sliding strips (9) that are wound with the cloth and are inherently rigid in the unwinding direction. Preferred Features: The sliding strips are made from high-grade steel, carbon composite material, etc. and are approximately the same thickness as the awning cloth. The sliding strips are connected in parts or points with the awning cloth and are guided in rails (10) or rail sections. Holes, cut-outs or teeth engaging with corresponding driving and/or stabilizing devices are provided on the sliding strips.
