Abstract (en)

[origin: EP1170449A2] The sliding fitment is movable between a closed (20.1), tilting, release and open position, and has two pairs of thrust surfaces with the counter surfaces on the rabbet of the frame or casement/leaf defining the path of the casement or leaf (20) between its two end positions. The rabbet (24) of the casement/leaf or frame has a movable thrust element (30) the free end of which carries at least one of the two thrust surfaces. Inside the frame or casement/leaf periphery are control surfaces (16) which transfer the thrust element end (34) from a position protruding from the casement/leaf or frame to a position next to the casement/leaf or frame (30.1).
