Abstract (en)
[origin: EP1170455A1] The shutter wall comprises a metal support frame (3) formed by vertical uprights (4) and horizontal crosspieces. The joint is composed of a continuous flexible material section (9) comprising a central strut (10) applied against an upright or crosspiece and two lateral webs (11,12). The webs are supported on panels (7) applied against a rebate in the bottom of cavities in the frame between its uprights and crosspieces. The central strut incorporates rigid inserts (18) which allow its fixing against the upright or crosspiece.
