Abstract (en)

[origin: EP1170514A2] The device for releasably holding at least two flat components (12) comprises a connector unit (14) and at least one holding unit (16, 16') which interacts with the connector unit, and is fixable into one of the cutouts (18) in the flat components so that in assembled state its face is flush with at least the surface (24) of one of the flat component.
