Abstract (en)

[origin: EP1170554A2] The primary circuit (10) comprises an appliance (11) providing warm or hot water, and a fluid-conveyor (14) which has a regulator. A heat exchanger (5) transmits heat from the primary circuit's fluid to the service water in the secondary circuit (20). The primary or secondary circuits contain a temperature sensor (17,27). A branch-point (18) for a branch pipe (19) behind the conveyor in the direction of flow is positioned in the primary circuit in the discharge side pipe (13). The branch pipe leads to a mixer valve (15) on the inlet side pipe (12).
