Abstract (en)

[origin: WO0160528A1] According to the method, motor vehicle bodies (10) are turned about an axis in order to paint the surfaces which have different inclinations. This allows all the surfaces of motor vehicle bodies (10), irrespective of their inclination, to be painted using the same type of application device (26, 28) and the same type of application machine (18, 20, 22, 24).
