Abstract (en)  
[origin: WO0108877A1] The invention relates to a device for compressing objects (16) that comprises a base plate (11), a frame (12) and a stamp head (14) which is displaceably guided on the frame (12). When compressing bulky objects (16), forces can arise in the peripheral direction of the stamp head (14). In order to reduce the forces introduced into the frame (12), the stamp head (14) is designed such that it can rotate with regard to the frame (12).
