Abstract (en)  
[origin: GB2349137A] The carrier is adapted to carry elongate articles such as bottles. Elongate pockets (5) each adapted to carry a single bottle are formed from one sheet so connected to itself (or to another sheet) as to form a bottom (14) and sides (8,9) of the pocket (5). A rigid rod (3) extends in a tube (2) across substantially the entire width of the sheet to act as a carrying handle. There may be four pockets (5) arranged in pairs back-to-back. The pockets (5) may extend vertically or almost horizontally, Figure 7, Tapes (6) remote from the handle (3) may allow the empty carrier to be tied in a rolled-up condition. The carrier may be made of cloth or other flexible but strong natural or plastics material.
