Abstract (en)
[origin: WO0108991A1] A lid (1) suitable for being fitted round an edge (13) of a container (11). The lid comprises a disc-shaped plate (2), a cylindrical skirt (3) extending downwards from said plate, which has an annular rib (4) on its inner side which is to be positioned round the edge in use, and an annular securing band (6, 21), which is connected to the skirt via a score line (7) on a side remote from the plate. The securing band includes at least one pivotable flange (9, 23) extending from said score line, which can be clamped into locking engagement with the container in use by means of a deformable locking lip (10, 26) that is connected to the lid.
