Abstract (en)  
[origin: WO0159272A1] The invention relates to a heating system for a motor vehicle which is driven by an internal combustion engine (10), wherein a heating device (30) comprising a combustion chamber (32) with a fuel injection device (35) and an ignition device in addition to a ventilation blower is controlled on the basis of operating parameters and/or environmental parameters of the motor vehicle and/or internal combustion engine (10) or control signals. According to the invention, the combustion chamber (32) is connected to the exhaust train (62) of the internal combustion engine (10) in the region of an exhaust collector (62) of the internal combustion engine (10) between the exhaust valves (24) and an exhaust catalyst by means of an exhaust line (42). .
