Abstract (en)
[origin: WO0060505A1] The invention relates to a data processing installation (1), comprising a data memory (5'), at least one data input interface (4) and a data output interface (6). The data (2) to be saved is input from any measured value transmitter (10) via the data input interface (4) and is forwarded to the data memory (5'). Said data memory is configured as a WORM (Write Once Read Many) magneto-optical output memory, in which the stored binary data (2) cannot be changed and can be retrieved at any time. A device is provided between the data memory (5') and the data output interface (6) which is configured for reading the binary data (2).
