Abstract (en)
[origin: WO0063934A1] The invention relates to a device for switching a connection in dependence on the condition of a device to be monitored, especially to a safety switch. The inventive device is provided with an actuator (2; 102) that is mounted on the device to be monitored and that is introduced into the device (1; 101) from a first side (6; 106). The inventive device is further characterized in that the actuator (2; 102) can be withdrawn from the device (1; 101) on a second side (30; 130).
