Abstract (en)  
[origin: WO0064173A1] A method and system for providing real time interactive video services through simultaneous reception of a video signal and provision of an interactive application. The method and system allow interactive input from a viewer of the video (102) simultaneously with viewing the video. The method and system also allow an interactive response to the viewer from the interactive application (110). The simultaneous reception of the video signal (120) or broadcast and provision for the interactive application allows services, including dynamically changing conditions associated with the video, to be provided to the viewer (102). For example, real time betting on sports events with dynamically changing wagering conditions can be provided.
