Abstract (en)
[origin: EP1172479A2] Support for rails borne on individual supports (58,60,56,62) functions in an area of a bridge seam (16) limited by a static first bridge buttress (14) and a second bridge superstructure (10). An accommodation (46,48) evolves towards the buttress and superstructure engaging over the seam, displaceably in relation to which the rail (26) is supported.
