Abstract (en)
[origin: WO0065059A1] The invention relates to a protein with a splicing factor activity in plants which has the amino acid sequence of the protein in fig. 1) A or has the sequence of the amino acids 1 to 4, 7 to 19, 45 to 52, 111 to 116 and 149 to 153 of the protein in fig. 1 and more than 85 % similarity with this protein or has more than 60 % similarity with the splicing proteins atSRp34/SR1 and SF2/ASF in accordance with fig. 2, the G-rich sequence that corresponds to the amino acids 85 to 113 of the atSRp34/SR1 protein being replaced by an S-rich sequence, or corresponds to or is derived from the corresponding protein in fig. 1 A from a different plant to Arabidopsis thaliana.
