Abstract (en)
[origin: GB2349074A] A foldable table comprises a first elongate support part 40, 50 which is pivotable about a base end 41, 51 between an upright, stowed position and a lateral operative position. Mounted to the first support part is a second elongate support part 44 which is extendable with respect to the first part so that, in an operative position, its outer end extends laterally and upwardly from the first support part. A table surface 10 is provided at the outer end of the second support part. For additional support a leg 60 may be provided. The first support part ideally comprises a pair of arms 40, 50 which move as a parallel linkage. The table surface may be formed from a plurality of leaves hinged together (11, 12, Fig. 9). The folding table is for use with a rotary clothes airer and the base end of the first support part is adapted to be mounted to a pole 2 supporting such an airer. Also claimed is a combination of a rotary airer with a foldable table.
