Abstract (en)

[origin: WO0060533A1] The invention relates to a method and a device for user authentication on the basis of a biometric complex of characteristics which is detected in the form of a surface pattern. From said surface pattern a plurality of characteristic elements are extracted, quantized positional and/or directional relations of said characteristic elements in relation to each other and/or to defined reference points or reference directions are determined, a number is assigned to each characteristic element and an identification number is calculated from said numbers.
