Abstract (en)

[origin: FR2793068A1] The invention concerns a device comprising at least an electron source with field effect in a closed structure defining an internal space which contains a reducing gas for oxidising the material emitting the electron source. The invention is characterised in that the reducing gas comprises a gas of formula N_xH_y with $x = 1$ or 2 and $y = 3$ or 4 , advantageously under pressure ranging between 10^{-8} mbar and 10^{-1} mbar. The invention also concerns methods for making such a device and appliances therefor.
