Abstract (en)

[origin: WO0065695A1] The invention relates to a connector (1) which is provided with coaxial or similar type input/output cables (3) and secured against the wall (2) of an electrical apparatus. The connector (1) comprises a metal frame (5) provided with lugs (51) which are inserted and pinched on the ends thereof (52) between a fixing plate (102) which is joined to the connector (1) and the wall (2) of the apparatus. The rear wall (50) of the frame (5) comprises openings (500) through which the cables (3) pass. The cables include a bare area which is welded to the rear wall of the frame (50) on the side of the openings (500), whereby continued grounding is ensured between the screening (31) of the cables (3) and the wall (2) of the apparatus supporting the connector (1). The invention also relates to a method for producing and installing said connector.
