Abstract (en)

[origin: FR2811328A1] The process enables the total valorisation of a petrol cut containing sulfur and olefins to produce a low sulfur fuel without appreciable diminution of the octane index. A process for the production of low sulfur petrol comprises three stages :- A) A primary stage in which sulfur compounds are partially converted to H₂S and saturated sulfur compounds ; B) Elimination of H₂S from the petrol product obtained from (A) ; C) Conversion of the remaining saturated sulfur compounds to H₂S.
