Abstract (en)

An anti-tamper device (10) for components (9) mounted in casings (1) comprising: generator means (11) to generate a detection signal that is propagated inside the casing (1) in given conditions, detector means (12) sensitive to said detection signal propagated in the casing (1), warning/ alarm means (20) connected to said detector means, said warning/alarm means being for signalling the variations of said detecting signal detected by the detecting means, the generator means (11) and the detector means (12) being situated inside the body (8) of the component in order to be protected from disturbances. <IMAGE>
