Abstract (en)

[origin: US6618959B1] A cushioning insert (1) to be inserted in the heel zone of a shoe is provided with a honey-comb structure (2) which is improved in such a manner that it provides good cushioning properties and sufficiently supports the heel even if the outsoles or soles (16) of the shoe are relatively thin. To this end, the cushioning insert (1) is made of a structural unit that includes heel shell (3) and a gas-tight honey-comb structure that is provided on the upper side (7.1) or the lower side (10) of the shell bottom (7) of the heel shell (3).
