Abstract (en)  
[origin: WO0164074A1] The invention relates to a table. A free working surface or an arrangement of at least one display unit and a keyboard can be arranged on said table which can be adjusted between the two positions. The inventive table comprises a table board (2, 102, 202) having at least one recess (3, 103, 203) and a display receiver (4, 104, 208) for receiving a display device (8, 106, 204). Said receiver can be adjusted between an initial position and a position of use and at least partially covers the recess in one of said two positions. The table also comprises a cover (5, 105, 205, 224) that can be adjusted between an unextended position and an extended position and at least partially covers the recess in the other one of the two positions. The table further comprises a keyboard receiver (6, 107, 205) for receiving a keyboard (9, 108, 209) that can be adjusted between an unextended position and an extended position and at least partially covers the recess in the extended position. The keyboard receiver (6, 107, 205) can be adjusted when the cover device or the display receiver is adjusted.
