Abstract (en)
[origin: WO0164501A1] The invention relates to a suspension sub-frame for a motor vehicle, in particular a passenger vehicle, comprising a front module (1) for receiving a vehicle front axle and a rear module (2) for receiving a vehicle rear axle. The front module (1) and the rear module (2) are interconnected via a central tube (3), whose respective ends are connected using a front coupling element (4) to the front module (1) and using a rear coupling element (5) to the rear module (2). A suspension sub-frame kit, in particular for niche-market vehicles, is thus obtained.
