Abstract (en)
[origin: WO0066606A1] A substrate for purifying nucleic acid and enriching for populations of nucleic acids from a single cell source consists of a matrix and anionic detergent affixed thereto. A method of making the substrate includes the steps of affixing an anionic detergent to the matrix. A method for isolating and archiving nucleic acid utilizing the matrix includes the steps of applying the nucleic acid sample to the substrate, the substrate physically capturing the nucleic acid and bonding the nucleic acid to the substrate.
