Abstract (en)
[origin: GB2349390A] Tablets and detergent compositions comprising a compressed clay component, which is compressed prior to introduction into the tablets or compositions. The compressed clay component provides an improved disintegration, dispersion or dissolution of the tablets or compositions. In laundry detergents or tablets, the selected compressed clay materials have shown to provide good softening as well. Smectite clays such as montmorillonites or bentonites compressed by a pressure of at least 10MPa are preferred.
