Abstract (en)
[origin: US6736647B1] The circuit board edge connector described serves for connecting a first circuit board and a second circuit board adapted to be mated substantially vertically with said first circuit board, and is characterized in that that the part of the circuit board edge connector to be connected to the electrical connector located on one side of the second circuit board as well as the part of the circuit board edge connector to be connected to the electrical connector located on the other side of the second circuit board, are constituted by separate electrical connectors.
