Abstract (en)

[origin: EP1176108A2] The procedure for the simultaneous winding of several material part webs onto separate rolls entails continuously recording a predetermined parameter of each individual roll and comparing the parameters of the rolls with each other. The winding is interrupted if a predetermined value of the difference between parameters is exceeded. The diameter of the individual rolls may be used as a parameter. An Independent claim is included for a system for the simultaneous winding of part webs onto rolls in which each roll has a sensor (40) to record its diameter parameter.
