Abstract (en)
Device for retaining or collecting and discharging moisture from or out of a cavity wall having a leaf, comprising a collection and discharge strip having a front longitudinal edge and a rear longitudinal edge, in which the rear longitudinal edge is destined to be situated at the inner or cavity side of the leaf, and in which the rear longitudinal edge is provided with a rigid rear strip integrally formed with the collection strip, for collecting moisture and guiding it to the collection strip, which rear strip also extends upwardly inclined from the collection strip and to the rear at a fixed angle with respect to the collection strip. <IMAGE>
