Abstract (en)
[origin: WO0065156A1] The invention relates to a guide wall for traffic routes which comprises a plurality of wall elements (3) that are interlinked with their front faces. Said wall elements (3) are linked with at least one anchoring element (2, 5) that is mounted on the ground, for example, on the pavement, the superstructure of a bridge or the like, via at least one fastening element (1). The at least one fastening element (1) is slidably guided vis-à-vis the at least one anchoring element (2, 5) so that the wall element (3) can be moved with its at least one fastening element (1) from an initial position to a position that is set off by a predetermined distance.
