Abstract (en)

[origin: WO0025332A1] The invention relates to a device for entering values by using a display screen provided for displaying the values and by using at least one element for manually entering values. In order to create a device of the aforementioned type which enables values entered by an element for manual entry to be clearly acknowledged, a support (42) for elements provided for entry is connected upstream from the display screen in a viewing direction. Said support comprises at least one transparent area (35', 36', 37') which is assigned to the element (35, 36, 37).
