Abstract (en)

[origin: WO0069192A1] A method for profiling disparate communications and signal processing standards begins with selection of a set of standards for analysis (32). Next, functions performed by the set of standards are identified (34) and ranked (36). A set of high ranked functions are then implemented as kernels (38), the set of kernels forming a programmable processor that enables implementations of any one of the set of communications and signal processing standards (42).
