Abstract (en)

[origin: US2002020426A1] A device for applying a product to keratinous fibers comprises a tail having a longitudinal axis X and an application element extending from an end of the tail. The application element may comprise at least a first face and a second face, each of the faces being delimited by two longitudinal edges and extending over at least part of a length of the application element. The first face may form with the axis X a first non-zero angle alpha having a vertex oriented toward a first end of the application element, and wherein the second face may form with the axis X a second non-zero angle beta having a vertex oriented toward a second end of the application element. The second end of the application element may be opposite to the first end.
