Abstract (en)

[origin: EP1178005A1] The device for hand control and manual guiding of a piece of handling equipment has a handle element (5) on each of the two free ends of a cross bar (6) fastened to a mounting (7). The position of at least one of the handle elements is adjustable by longitudinal displacement of the cross bar, and the two handle elements together with the cross bar forms a guide frame (6a) which can be assembled from different length handle elements and cross bars in modular fashion.
