Abstract (en)  
A electronic combination lock includes a rotatable shaft which interacts with a bolt to permit locking and release. A solenoid armature shaft interacts with a rotatable shaft to inhibit or permit rotation of the shaft. A first battery is located in a housing for operating the solenoid. Terminals are provided in the front of the housing for the lock to permit connection with a second battery to provide power to the lock as necessary. A pistol grip permits rotation of the shaft when the solenoid armature is free of the shaft. <IMAGE>
