Abstract (en)

[origin: EP1178571A2] Improvements in devices and methods for electrical and signal distribution, particularly in shipping environments are described and relate to branching devices with contacts for perforating and/or cutting the insulation, or with crimping and/or welding of the respective ends of the conductors, as well as electrical-conductor cables formed as flat ribbons. Apparatus and machines for producing the branching devices and/or the above-mentioned flat-ribbon cables are also described. <IMAGE>
