Abstract (en)  
[origin: WO0069685A1] A mirror actuator housing construction comprises a mirror housing frame having an actuator housing and a mirror-adjusting plate with mirror provided therein. Located in the actuator housing are drive means for rotating the mirror-adjusting plate with mirror relative to the mirror housing frame about a mirror rotation point located adjacent the mirror-adjusting plate. The mirror rotation point is a virtual rotation point relative to which the actuator housing is movably connected to the mirror housing frame, while the mirror plate with mirror is fixedly mounted on the actuator housing. The actuator housing with the components provided therein and secured thereon can be snap-fitted on the mirror housing frame as a unit.
