Abstract (en)

[origin: WO0171127A1] The invention relates to a lock for doors of housings or cabinets with particularly narrow frame profiles, comprising a bolt mechanism which is longitudinally moveably guided in the frame profile, and a door plate which can be fixed on the outside of the door leaf, said door plate having a first door plate area (11) with the handle (13) located therein and a second door plate area (12) in which the locking device is located.
