Abstract (en)
[origin: DE19922423A1] An electro-mechanical servo-drive (1) comprising at least one electromagnet and an armature having a shank (17). The armature is coupled mechanically to at least one reset means and can be moved between a first bearing surface (15a) on the electromagnet and a second bearing surface (15b). The shank (17) is shaped in the form of a hollow body.
