Abstract (en)
[origin: EP1179532A1] To provide a novel, industrially superior process for producing a 1,4-substituted cyclic amine compound which is useful as a pharmaceutical, and an intermediate for the process. That is, a process for producing an indole compound (I), which comprises reducing a 1,4-substituted 2-nitrophenyl compound (VII) to give a 1,4-substituted 2-aminophenyl compound (V); reacting the compound (V) with an N-substituted 4-piperidone compound (VI) to give a 1,4-substituted 2-piperidylaminophenyl compound (IV); cyclizing the compound (IV) to give a 2-oxoindoline compound (III); halogenating the compound (III) to give a 2-halogenated indole compound (II); reducing the compound (II); and if necessary subjecting the resulting compound to alcoholysis or aminolysis. <CHEM> <CHEM> wherein each of R<1> and R<2> represents a substituent; X represents a halogen atom; and n is a numerical subscript.
