Abstract (en)

[origin: EP1179612A1] Cathode consists of an electrically conducting support with a coating of electrochemically deposited lead having a density of 0.001-2g/cm<sup>3</sup>. Independent claims are also included for: (1) a process for the production of a cathode comprising depositing a lead layer onto the cathode from an aqueous catholyte solution containing a lead salt; and (2) a process for the electrochemical reduction of organic compounds.
