Abstract (en)

[origin: WO0069697A1] The invention relates to a device for adjusting and elastically locking the end position of movable switch parts (1), especially the switch tongues of grooved grider rail switches, comprising an axially displaceable rod (15) and a tube (17) enclosing the rod (17) in which a spring (29) surrounding the rod (29) is tensioned by stops and locking members (26, 26') that can move radially outward are mounted, wherein the rod (15) has control stops (24, 25) placed at an axial distance from one another for a radial inner position of the locking members (26, 26') and the tube (17) has stops (32, 33) for the outer position of the locking members (26, 26'), wherein at least one of the control stops (25) can be adjustably fixed to the rod (15) in axial direction of the rod (15).
