Abstract (en)
[origin: DE19922357C1] The catalyst carrier comprises corrugated metal sheets (13a,13b,13c) arranged one above the other to form channels through which a fluid can flow. These are held together by parallel reinforcing components (30,31,32) which stretch across the carrier. The expansion of these components across their length is small compared to that of the carrier in that area.
