Abstract (en)
[origin: EP1180450A1] The lifting load platform is pivot-mounted on the two transversely spaced connecting heads (30) of lifting equipment (27,28). On the side of the connecting heads facing the rear of the vehicle, and especially over the whole width of the platform, there is a connecting flange (32) for the fastening of a movable or fixed loading ramp or a stop rail (34) made of elastic material. With the platform raised to the level of the load floor the loading ramp lies on the load floor (12) or the stop rail bears by the end face on the load floor.
