Abstract (en)

Process for monitoring an exhaust gas in a recirculating device of an I.C. engine comprises adjusting a determined change of the exhaust gas recirculating rate; measuring the NO_x concentration in the exhaust gas; and establishing a defect in the recirculating device from the concentration difference depending on the change of the exhaust gas recirculating rate. Preferred Features: The concentration difference from the NO_x concentration measured before and after the change of the exhaust gas recirculating rate. The NO_x concentration is measured downstream of a NO_x storage catalyst and the catalyst is saturated to its maximum storage capability before adjusting the determined change of the exhaust gas recirculating rate. Saturation is recognized downstream of the catalyst. Monitoring is only carried out when the operating parameters of the engine lie within a determined region and/or have limited dynamics.

Abstract (de)

Verfahren zur Überprüfung einer Abgas mit einer Abgasrückführrate vom Auspufftrakt zum Ansaugtrakt rückführenden Abgasrückführanlage einer Brennkraftmaschine, bei dem eine bestimmte Veränderung der Abgasrückführrate (Δ AGR) eingestellt, die NO_x-Konzentration (NO_{x1}, NO_{x2}) im Abgas gemessen und bei Ausbleiben einer bestimmten von der Veränderung der Abgasrückführrate abhängigen Konzentrationsdifferenz ein Defekt der Abgasrückführanlage festgestellt wird. <IMAGE>
