Abstract (en)  
A system and method of servicing a mobile magnet (18) by wireless monitoring is provided. The mobile magnet (18) has a sensor (22) configured to sense a characteristic of the mobile magnet (18) and a computer (24) coupled to the sensor (22) configured to receive sensor data representative of the sensed characteristic. The method includes receiving the sensor data at a remote monitoring station (14) via a wireless communication link (34) with the computer (24); determining whether the mobile magnet (18) needs service based on the sensor data; and dispatching a service technician to the mobile magnet (18) when the mobile magnet (18) needs service. <IMAGE>
