Abstract (en)
[origin: WO0070995A1] The applicator capsule with roller spreader for fluid products is constituted by three plastic parts which are press-fittable together, as follows: a first annular part (1) provided with an annular gullet (3) which is press-inserted onto the container (5), and with an internal seating; a roller sphere (2) housed rotatably in the internal seating made in the first annular part (1); and a cap (6) for containing all other parts of the capsule. A first and a second connecting device (1a and 6a) are provided, the first made in the first annular part, the second internally of the cap (6), which couple together in order that the various elements of the capsule can be assembled.
