Abstract (en)  
[origin: WO0075430A1] The invention relates to a system of shaped blocks, comprising full blocks with an essentially rectangular base and half-blocks, which are essentially formed by halving the full block in the transversal central plane, for laying in the longitudinal bond. Each section (2a, 2b, 3a, 3b) of the longitudinal sides of a full block (1a), which are separated by a transversal central plane (7), has at least two studs (12, 13; 14, 15; 43, 44; 45, 46), the stud (12; 15; 43; 46) that is closer to one transversal side (4, 5) of the shaped block (1) forming an interlocking pair (48) with a stud (13; 14; 44; 45) of a corresponding block that is further from a transversal side (4, 5), said pair being positioned at least a stud-width away from an interlocking pair (49) formed by the stud (13; 14; 44; 45) that is further away from the transversal side (4, 5) and the stud (12; 15; 43; 46) of the corresponding block that is closer to the transversal side.
